### PROJECTS

**project 1:** Simple Calculator This simply works by taking three user inputs grouped into one scanf() function. These are seperated into valueOne, valueTwo and the operator (choice of \*,/,+,-,^). A switch statement is then used in order to run the right calculation for the given operator. Mess around with the code and change bits here and there.

**project 2:** Phonebook Management System the C programming language is a software application that allows users to store, organize and manage large numbers of contact records efficiently. The system is designed to have functions such as adding, updating, viewing, listing and deleting contacts.
